JULIAN CANO

Automation & DevOps Engineer — Python · n8n · RAG Pipelines · AWS & Self-Hosted Infrastructure

Colombia (remote, LATAM) | +57 323 707 3472 | juliancano.dev@gmail.com | linkedin.com/in/juliancanodev | github.com/JulianCanoDev

SUMMARY

Automation-first developer and infrastructure engineer. I build multi-tenant AI platforms and business automation that run themselves: RAG pipelines (LangChain, Qdrant, MinIO), WhatsApp customer-service agents (Chatwoot, Evolution API), workflow automation (n8n), and backend services in Python/FastAPI and C#/.NET. I deploy and operate my own production infrastructure across 4+ Linux VPS with Docker, Kubernetes, and Dokploy — 100% API-driven, zero manual UI. Spec-Driven Development (SDD) practitioner.

EXPERIENCE

AI & DevOps Architect Nov 2025 – Present

Projechtech (remote, Chile)

- Architect secure AWS and self-hosted infrastructure (Docker, Kubernetes, Dokploy) for sovereign data management.
- Orchestrate LLM/RAG and multi-agent systems (n8n, LangChain) automating complex business logic and enterprise workflows.
- Accelerate modular AI delivery using Spec-Driven Development (SDD): specification-first templates that cut back-and-forth and rework.
- Operate containerized deployments end to end: CI/CD, reverse proxying, backups, and monitoring across AWS and dedicated Linux VPS.

Founder & Automation Engineer — Daimaton 2026 – Present

Independent project — multi-tenant RAG platform for WhatsApp AI agents

- Designed and shipped a multi-tenant platform where each business tenant gets an AI agent on WhatsApp with its own knowledge base (Qdrant vector DB + MinIO document storage).
- Automated the full tenant lifecycle 100% via Platform API — provisioning, WhatsApp channel onboarding, and knowledge-base ingestion with zero manual UI work.
- Integrated Chatwoot (customer inbox) and messaging APIs; built a FastAPI admin dashboard for monitoring tenants, collections, and usage.
- Operate production across 4+ Linux VPS: gateway orchestration, reverse proxying (Dokploy), nightly automated backups, and health monitoring — self-hosted end to end.
- Automate document ingestion pipelines: PDF/DOCX → markdown → vector index, giving each tenant instant search over its own knowledge base.

Unity XR Developer / Automation Specialist Mar 2025 – Oct 2025

XNove 360

- Shipped VR training experiences to Meta Quest headsets (Unity 3D, OpenXR).
- Automated internal content workflows with n8n; built backend and API integrations that removed repetitive manual steps.

SKILLS

Automation & AI	n8n, LangChain, RAG pipelines, multi-agent orchestration, OpenClaw gateway, Firecrawl web scraping
Backend	Python, FastAPI, C#/.NET, Supabase, PostgreSQL, REST APIs, Spec-Driven Development
Infrastructure	AWS, Docker, Kubernetes, Dokploy, Linux VPS management, reverse proxying, backups, monitoring
Data & Storage	Qdrant (vector search, BM25), MinIO (S3), document ingestion pipelines, Firecrawl web scraping
XR (secondary)	Unity 3D, OpenXR, Meta Quest, VR Interaction Framework, Blender
Languages	Spanish (native), English (professional intermediate)

EDUCATION

B.S. in Multimedia Engineering — UNAD (Universidad Nacional Abierta y a Distancia), Colombia

Focus: cloud infrastructure, machine learning fundamentals, and applied AI.

Additional training (in progress): specialized pathways in cloud infrastructure, ML fundamentals, and applied AI use cases.
